Silver Coin Melt Value Calculation

Submitted at 17:28:28 CST on March 6, 2008.

Values Entered:

Quantity: _____
Coin Type: [1971-1976 Ike Dollar](#)
Silver Price: [\\$20.13 / troy ounce](#)

Answer:

Total silver value is **\$0**.

Statistics:

- » There are **0** troy ounces of silver in silver Ike dollar(s).
- » Each Ike dollar contains 0.3162 troy ounces of silver and is valued at **\$6.37** when silver is at \$20.13 / oz.
- » A roll of Ike dollars has 20 coins and is valued at **\$127.32** when silver is at \$20.13 / oz.

Bid/Ask Spread:

Most "junk silver" coins on Ebay often sell between a +/- 5% spread of the melt value. For example, if you have a silver coin that has a \$1.00 melt value, you should be able to find someone who's willing to buy/sell it between \$0.95 - \$1.05. This can change when silver prices are volatile in either direction, but I think it's a good standard to follow.

If you're planning to buy/sell Ike dollar(s) when silver is priced at \$20.13 / oz, expect the final total to fall between **\$0 - \$0**.

Ebay Auctions (1971-1976 Ike Dollar Listings Only):

I believe that the old saying, "A coin is only worth what someone will pay for it," is absolutely true. I like Ebay because it displays what people are *actually paying* for coins. Monthly coin price magazines and online price lists may not reflect current market conditions because they don't demonstrate what people are actually willing to pay.
